LPI certification doesn't merely claim you have the skills, it proves it.

Verified credentials get you to the top of the resume pile and on recruiter hot lists. Not to mention, it's the quickest way through the HR firewall.

LPI's vendor neutral certifications show open source software versatility. This means that rather than being limited to one particular vendor technology, you will be capable of working with multiple open source technologies – mirroring the environments you will experience on the actual job.

Because we provide detailed exam objectives, your exam prep time is more efficiently spent. As well, our certifications are valid for 5 years; longer than most.

LPI has certified professionals worldwide. It's the internationally recognized standard, which means you have a skill set and career that can travel with you, be recognized, and in demand throughout the world.

LPI is a non profit organization.

LPI is the global certification standard and career support organization for open source professionals. With more than 175,000 exam holders, it's the world's first and largest vendor-neutral Linux and open source certification body. LPI has certified professionals in over 180 countries, delivers exams in multiple languages, and has hundreds of training partners.

Our purpose is to enable economic and creative opportunities for everybody by making open source knowledge and skills certification universally accessible.

BSD SPECIALIST

Become a Certified BSD Professional

Linux Professional Institute (LPI) certified professionals do better in their careers. They're more likely to get higher paying jobs, advance their career, have more choices, and have more flexibility and skills portability. It's no surprise, given LPI is the global certification standard and career support organization for open source professionals.

Become a Certified BSD Specialist.

The BSD Specialist certification is part of the Linux Professional Institute Open Technology certification program.

The exam focuses on the practical skills required to work successfully in a FreeBSD, NetBSD or OpenBSD environment and tests the knowledge and skills needed to administer BSD operating systems.

The typical BSD Specialist certification holder is a system administrator of BSD operating systems. The certification holder has an understanding of the architecture of the BSD operating systems. This includes the ability to manage various aspects of a BSD installation, including the management of user accounts and groups, processes, file systems, installed software, and client networking configuration. The candidate is experienced in using standard BSD and Unix tools on the command line.

More than 70% of the suvery participants stated certification can make you more attractive to potential employers.

Linux Professional Institute BSD Specialist Topics

- BSD Installation and Software Management
- Storage Devices and BSD Filesystems
- Basic BSD System Administration
- Basic BSD Network Administration
- Basic Unix Skills

For IT professionals who want their Linux and open source skills verified in order to boost their career momentum, why wait? According to the Foote Partners report, 'IT Skills and Certification Index', there's double-digit growth in bonuses paid to Linux Professional Institute certified candidates.

One exam covers three BSD operating systems.

The objectives contain command and file names which might be relevant within the exam. Candidates should be aware that the exam covers three different BSD operating systems. Commands and files with the same name might exist on all or some of these systems and still differ in their behavior or content. This might be the case even when the command or file name is listed in the 'common' section of the objectives. Candidates are expected to be able to use the files and commands on all BSD operating systems mentioned in the objectives. Where appropriate, the exam will be specific which BSD operating system is covered.
